

MODEL

Free flow nose to side check valve

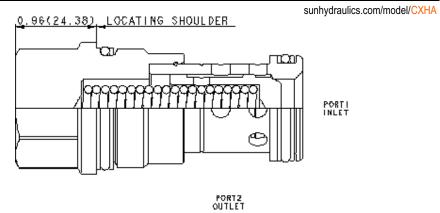

SERIES 3 / CAPACITY: 80 gpm / CAVITY: T-16A

#### CONFIGURATION

X	Control	Not Adjustable		
Е	Cracking Pressure	75 psi (5 bar)		
N	Seal Material	Buna-N		
(none) Material/Coating		Standard Material/Coating		

Free-flow, nose-to-side check valves are on/off circuit components that allow free flow from the inlet (port 1) to the outlet (port 2) and block flow in the opposite direction.

## **TECHNICAL FEATURES**

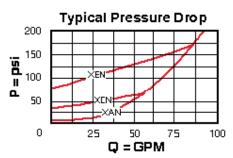

- Two-port check valves share the same cavity for a given frame size, however, pay close attention as flow paths may be in opposite directions.
- Check valves offer extremely low leakage rates with a maximum leakage of less than 1 drop per minute (0,07 cc/min).

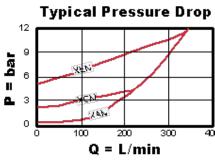

**D** 50 psi (3,5 bar) **F** 100 psi (7 bar)

- Will accept 5000 psi (350 bar) at ports 1 and 2.
- Cartridges configured with EPDM seals are for use in systems with phosphate ester fluids. Exposure to petroleum based fluids, greases and lubricants will damage
  the seals.
- Corrosion resistant cartridge valves are intended for use in corrosive environments and are identified by the model code suffix /AP or /LH (see CONFIGURATION section). For further details, please see the Materials of Construction page.
- Incorporates the Sun floating style construction to minimize the possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge
  machining variations.
