Products : Cartridges : Flow Control : 2 Port : Fully Adjustable, Pressure Compensated, with Reverse Flow Check

Product Description

Fully adjustable, pressure-compensated flow controls with reverse-flow check provide precise flow regulation for meter-in or meter-out applications where there may be wide pressure fluctuations. They are infinitely adjustable from nearly closed up to the maximum flow. An integral high-capacity check valve provides unrestricted flow from port 2 to port 1.

Technical Features

- All 2-port flow control cartridges are physically and functionally interchangeable (i.e. same flow path, same cavity for a given frame size). However, cartridge extension dimensions from the mounting surface may vary.
- A balanced adjustment mechanism allows for easy adjustment even at high pressures.
- Accurate pressure compensated control requires that a 200 psi (14 bar) minimum pressure differential be maintained across the valve.
- The sharp-edged orifice design minimizes flow variations due to viscosity changes.
