FILTER MANAGER PROGRAM

ORDER:

Filters are listed by application to ensure accurate filter ordering. This allows the purchaser to easily monitor change-out intervals, develop a regular ordering routine and maintain appropriate inventory.

- Reduce Inventory Errors
- Helps to Teach New Employees
- Maintain Accurate Stock

ANALYZE:

Create reports to help analyze the performance of each filter application, identify issues and places to improve performance.

- Compare Filter Performance
- Early Identification of Problems
- Evaluate Fuel Deliveries

MANAGE:

The data collected from this program will provide information to help optimize equipment performance and prevent long term damage.

- Optimize change out intervals
- Prevent Long Term Damage and Downtime
- Help with Warranty Claims

The screenshot shows the 'Wojanis Filter Management System' interface. It includes a navigation bar with 'Home', 'Filter Management', 'My Account', and 'Sign Out'. Below the navigation bar is a welcome message and a legend for filter status: Normal (N), Abnormal (A), and Severe (S). A table lists various filter applications with their last oil sample dates and status indicators.
